

DMSMS

DIMINISHING MANUFACTURING
SOURCES & MATERIAL SHORTAGES

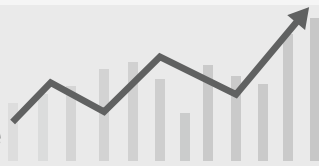

KIHOMAC's History With DMSMS

In 2013, KIHOMAC began supporting the Air Force DMSMS A&R Enterprise Program. Since then, we have provided over \$750M in cost avoidance to the US Military through the research of over 151,000 individual part numbers. This has resulted in 76,000 F3I recommended resolutions being given to the government.

Why KIHOMAC?

KIHOMAC offers innovative engineering and logistics solutions for DMSMS issues affecting every weapons system managed by the US Air Force.

Our unique software allows standardization and customization in our research processes, increasing accuracy and decreasing turn-around times drastically. Our software is fully customizable and can be tailored to each individual customer's needs.

Proactive Work

We excel at providing early detection and resolution of component shortages due to obsolescence. This ensures that depots are able to continue LRU and SRU repair processes uninterrupted.

Reactive Work

KIHOMAC provides short turn-around times for reactive part requirements (MICAP, Maintenance Line Stoppage, etc), minimizing aircraft availability impacts.
